

### **REMARKS**

This response is filed in regards to the Office Action mailed August 31, 2010 in the above captioned patent application.

In that Action, various rejections were presented for all pending claims 17, 59, 60, and 71-110.

A continuation-in-part (CIP) application is being filed concurrently with this response. That CIP application claims priority upon the above captioned patent application.

New claims are presented in the CIP application which are believed to overcome all grounds of rejection noted in the above captioned patent application.

In particular, many of the claims in the CIP application recite subjecting the coating layer to a baking temperature greater than 180°C and up to 350°C to form the various anticorrosion coatings. Additional description and results of investigations are reported in the CIP application in further support of the patentability of the claimed subject matter.

The CIP application is filed in lieu of the above captioned application and it is expected that the above captioned application will go abandoned.

A one (1) month extension of time request and payment therefor accompanies this response, and concurrently filed CIP application, thereby extending the period for response to December 31, 2010.

If there are any additional fees resulting from this communication, please charge same to our Deposit Account No. 18-0160, our Order No. CRE-17903.

Respectfully submitted,

RANKIN, HILL & CLARK LLP
